## EXPERIENCE

### *Short Description*

**Jul 2020 - Present.** Current job as a Data Scientist at Rackspace Technology. I helped on the migration of data from on-premises servers to the GCP cloud. I worked on a churn prediction model that uses features related to the COVID19 spreading aside from other business-related features to predict customer attrition, this work includes the development of the model using XGBoost, as well as the deployment of it using Kubeflow and the serving via Seldon Core. I'm also involved in constructing an SSAS OLAP Cube to be used by the company for inventory-related queries. I'm currently working on NLP tasks, such as the extraction of themes out of tickets using semantic similarity, by getting embeddings vectors out of sentences with a transformer architecture named Universal Sentence Encoder. I'm reading research on how to translate voice to text. I build two production-level applications using Plotly Dash.

**Dec 2019 - Jun 2020.** I worked on a face recognition system using a method called Sparse Representation and another one using Neural Networks. I acquired a deep understanding of Neural Networks for Face Detection and Recognition, Image Classification, Language Processing, among others, as well as some experience in Data Visualization tools such as Tableau.

**Sep 2019 - Dec 2019.** Data Scientist Trainee at Softtek. I learned about different statistical and machine learning techniques, as well as algorithms, to study a wide variety of problems.

**2016 - 2019.** As mentioned below, I have taught Computer Science classes, in which the Python programming language was introduced to Physics students.

**Sep 2018 - Dec 2019.** I have research experience using the Einstein Toolkit, a software platform created for supporting research in relativistic astrophysics and gravitational physics.
