EDUCATION

2022	MSc in Scientific Computing and Data Analysis , Department of Computer Science, Durham University, Durham, United Kingdom.
2021	Specialization: Earth and Environmental Sciences Dissertation: <i>"GPU Programming with Standard C++"</i> Description: Used NVIDIA HPC SDK compiler suite to accelerate ExaHyPE's Finite Volume scheme, a generic code base to simulate wave equations. The resulting code was benchmarked against an OpenMP GPU offloading code port of exactly the same code structure, and we report on some problems and benefits of the new C++ software stack. Advisor: Dr Tobias Weinzierl GRADE: Distinction Detailed List of Grades
2018	BSc in Physics , Faculty of Science, National Autonomous University of Mexico (UNAM), Mexico City, Mexico.
2011	Dissertation: <i>"Numerical Study of Vlasov Equation in the Schwarzschild Metric"</i> Description: Development of a finite difference scheme for evolving the relativistic Vlasov equation in the context of a black hole metric. This approach assumes the equation is advective, with velocities that vary with both time and position. Advisor: Dr Miguel Alcubierre OVERALL SCORE: 9.37/10 Detailed List of Grades

EXPERIENCE

Short Description

Mar 2023 - Present. ML R&D Programmer at Rockstar Games, specializing in the deployment and management of on-premises Kubernetes infrastructure for the ML Animation Team. Proficient in using tools such as Kubectrl, Helm, Ansible, ArgoCD, Grafana, and HashiCorp Vault. Actively involved in all stages of machine learning model development, from data gathering and preprocessing to model training, evaluation, and production deployment. These models are used for asset creation in our projects.

Sep 2022 - Mar 2023. Associate ML R&D Programmer at Rockstar Games.

Jul 2020 - Jan 2022. Data Scientist at Rackspace Technology. I helped migrate data from on-premises servers to the GCP cloud. I worked on churn prediction models that used features related to the COVID19 spreading aside from other business-related features to predict customer attrition, this work includes the development of the model using XGBoost, as well as the deployment of it using Kubeflow and the serving via Seldon Core. I was also involved in constructing an SSAS OLAP Cube to be used by the company for inventory-related queries. I worked on NLP tasks, such as extracting themes out of tickets using semantic similarity, by getting embeddings vectors out of sentences with a transformer architecture named Universal Sentence Encoder. Worked on how to translate voice to text. I built two production-level applications using Plotly Dash.

Dec 2019 - Jun 2020. Data Scientist at Softtek. I worked on a face recognition system using a method called Sparse Representation and another one using Neural Networks. I acquired a deep understanding of Neural Networks for Face Detection and Recognition, Image Classification, and Language Processing, among others, as well as some experience in Data Visualization tools such as Tableau.

Sep 2019 - Dec 2019. Data Scientist Trainee at Softtek. I learned about different statistical and machine learning techniques and algorithms to study a wide variety of problems.

Sep 2018 - Dec 2019. I have research experience using the Einstein Toolkit, a software platform created for supporting research in relativistic astrophysics and gravitational physics.

2016 - 2019. Worked as a Teacher's Assistant. I've given lectures aimed at Computer Science and Physics Students on the following topics:

- Computer Science.
